

STREIT FORGED WHEELS

2020

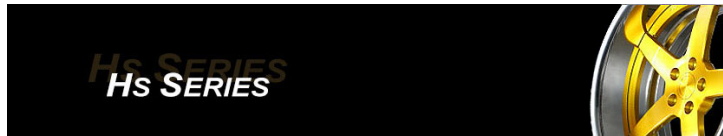

Nutzen Sie unsere über 15-jährige Erfahrung und lassen Sie sich zu all Ihren Fragen rund um Reifen und Felgen von unseren Experten beraten. Ihr Wunschdesign wird für Ihr Fahrzeug angepasst. Wählen Sie aus diversen Konstruktionsoptionen und Farben aus. Als Grundlage dieser 2 teilig geschmiedeten Felgen dient hochwertiges 6061-T6 Aluminium. Alle Felgen inklusive CH Eignungserklärung und passendem Befestigungsmaterial. Ihre Wunschfelge nach Vorlage? Senden Sie uns Ihre Zeichnung Schmiedefelgen nach Mass zum attraktiven Preis!

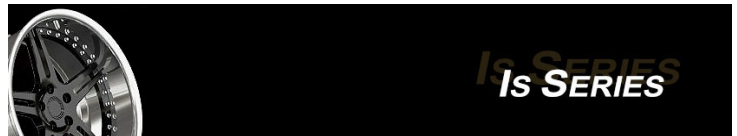

The structure is made of carbon outer rim and 6061 aerospace grade forged aluminum. It achieves the goal for 40% to 50% lighter than cast wheel, improves vehicle performance, braking force, traction.

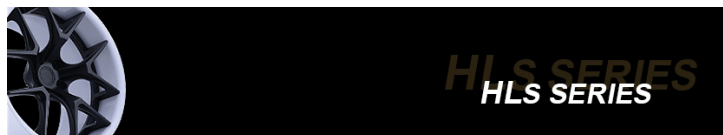

The feature of this series is to put the point on the disk surface. To enhance the value of product, wheels are embellished with wavy line by milling tool before painted or after painted. The series is meant for customers with unique taste.

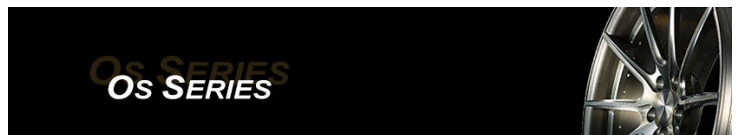

This series is more about the Rim. The deep of rim are available for 63mm (2.4 inches) for front wheel and 114mm (4.5 inches) for rear wheel. This kind of design makes the rim visually bigger, and is specially made for VIP, special tuning or American style.

This product is based on the design of HS series. It takes the exposed way through the fixed bolts on the DISK and RIM to form the high texture and the strong visual effects which must set off the high-quality products and the owner's temperament.

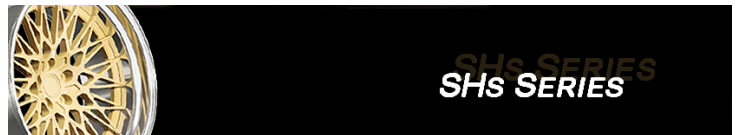

The series is a groovy combination of the Rim with 2.4 inches or 4.5 inches Lip and the extremely extended Disk. It represents exaggerated visual effect, which is extraordinary from normal wheel design.

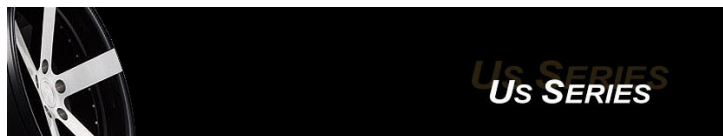

Based on the framework of US series, use the design demands of OS series, ball end milling tool to create round and R angle on so as to emphasize three dimensional effects and structures.

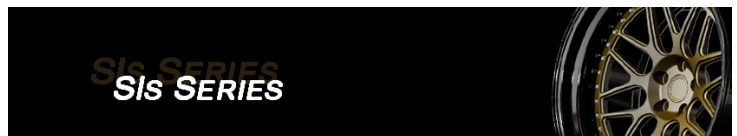

The feature of HH series is to make rim prominent. There are 144mm (5.7 inches) to 208mm (8 inches) for choice. HH series is designed for the super wide car, PICK UP and customers having special modified requirement.

The focus of this series is on the rim, which has a stepped design. The depth of rim is 75mm (2.5 inches) to 138mm (4.5 inches). The rim has a more layered and deep visual effect.

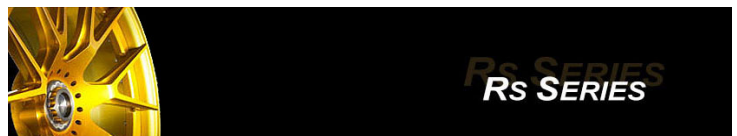

This series applies bold and innovative ideas to extend the disk from the outer rim to the center without affecting the safety structures. It creates the deep concave which makes a strong visual impression as well as an effect of wheel magnification.

The rim part of this series has a stepped design. The depth of rim is 75mm (2.5 inches) to 138mm (4.5 inches). With the exposed screws, it is elegant, dynamic, and very impressive.

Mainly design concept of LS series is designing disk with 50 degree to represent as well as changing traditional wheel design of straight line or Arc, it increases the horsepower on the sense of sight. This series will be the best option for customers with unique taste.

This product is aimed for racing purpose with single nut design. It is used for GT3 series in generally.

The concept of this series is to emphasize visual effect by convex the disk from inner to outer. Especially, the convex exceed the surface of rim or rotating, it makes an enormous horsepower visual effect. It is suitable for car owner who wants to be one in a million.

Titanium Screws, Forged Screws, Forged Screws for IS, TPMS Adapter, Center Cap, Valve Stem
